

Job Description:

GEOTECHNICAL PROJECT MANAGER

You will be joining EGS's team based in Hong Kong and working closely together with locally and internationally based geotechnical, geophysical, hydrographic and engineering teams.

As Geotechnical Project Manager, you will be involved at all level of a project from the initial tendering activities to the final delivery of data. Your tasks will include technical reviews, preparation of project documents, mobilization planning, management of subcontractors, day to day project management and final data delivery.

You will supervise field investigations, and guide lower level professionals in the completion of assignments. The position commands responsibility and necessity to set example. Initiative is a prerequisite part in the role.

The role will require international travel on a short-term basis between EGS offices primarily in the Asia-Pacific region and occasionally working from client/project offices. You may also be required to work offshore onboard EGS vessels.

Qualifications required:

- B.S.c. or M.Sc. level in Geotechnics, Civil Engineering or equivalent from a recognized university

Skills/experience required to do the job:

- 5+ years' experience in marine geotechnical engineering work and project management
- Experience offshore on geotechnical drilling vessels using various equipment from wireline CPT to seabed CPT, vibrocore, etc. on Oil & Gas and Offshore Wind projects
- Understanding of soil/rock laboratory testing
- A good knowledge of gINT and ArcView software is preferable
- Excellent communication skills in English both oral and written
- Possess excellent technical skills with a sound commercial background
- Ability to work within a hectic environment and manage multiple projects at a time
- Capable of working independently

If you think your profiles matches the position, please send your CV and cover letter to personnel@egssurvey.com.

About EGS:

EGS is a leading international group of companies with offices in Europe, the Americas, Asia and Australia, with its headquarters hub in Hong Kong. EGS provides global specialist multi-disciplinary

marine survey support, and delivers solutions to the Offshore Renewables, Oil and Gas, Telecommunications and Marine Infrastructure market sectors.

First established in the UK and shortly after in Hong Kong in 1974, EGS remains an independent company, which over the last 40 years has grown into an international network of services hubs and centres of excellence.

EGS is an equal opportunity employment company that is proactive in employing a diverse spectrum of people from various professions and different cultures. EGS' large, multinational professional pool of staff offer a diverse, experienced world-class service, tailor-made to finding global solutions.

What really distinguishes EGS is the caliber of its people, which allows EGS to create an environment where innovation and professionalism flourish through teamwork.
